

Service Package (Optional)

Maintenance, Cleaning & Calibration

Just like your annual car maintenance, we recommend regular hardware service in order to maintain the efficiency and service life of your Flexijet. Your Flexijet will be cleaned, serviced, and precisely calibrated by one of our certified technicians.

Battery Check and Replacement

When the Flexijet is actively used, the battery capacity decreases over time. We will check the battery life and output during calibration and replace when needed (covered under warranty).

Software Updates

Flexijet delivers major software updates every year! We work closely with our customers and are constantly striving to optimise and improve our software to adapt to the needs of today, while also planning for tomorrow.

Loaner Program

The Flexijet loaner Program is always available for our customers. With the optional service plan, even the ground shipping costs are included!

Remote Calibration Check – Always Included.

Did something happen to your Flexijet? Not sure if it needs to be calibrated? Give our support team a call and we remotely log in and check the calibration without any costly shipping fees!

Direct Connection to Professional Support – Always Included.

Support is always available for our customers regardless of their service plan status! Flexijet support staff have professional experience in the field, understanding the challenges of measuring, and can help walk you through your project's.

Extended 3-year Warranty – Service Plan Only

Add an optional service plan for your 2nd and 3rd year without any delays and you will qualify for an extended 2 and 3-year warranty as an added bonus for being a loyal customer!
